

Student's Name: _____

Science Projects-Narrowing down the focus

- In choosing potential topics for your project, explore different areas: life science, chemistry, technology, biology, astronomy, electricity, etc.
- Choose possible experiments that are not too easy or too difficult.
- In choosing a subject or topic, please keep in mind time constraints. Don't choose an experiment that requires you to grow something for six months or something so simple that you can complete it in one day.

The possible topics for my science project are as follows:

1) Topic 1: _____

2) Topic 2: _____

3) Topic 3: _____

I understand that I must narrow down my topic and have a final choice by Friday, September 12.
